Security first!

Having a swimming pool is enjoying comfort.
It is a pleasant meeting spot for family and friends, a place where people make fun.

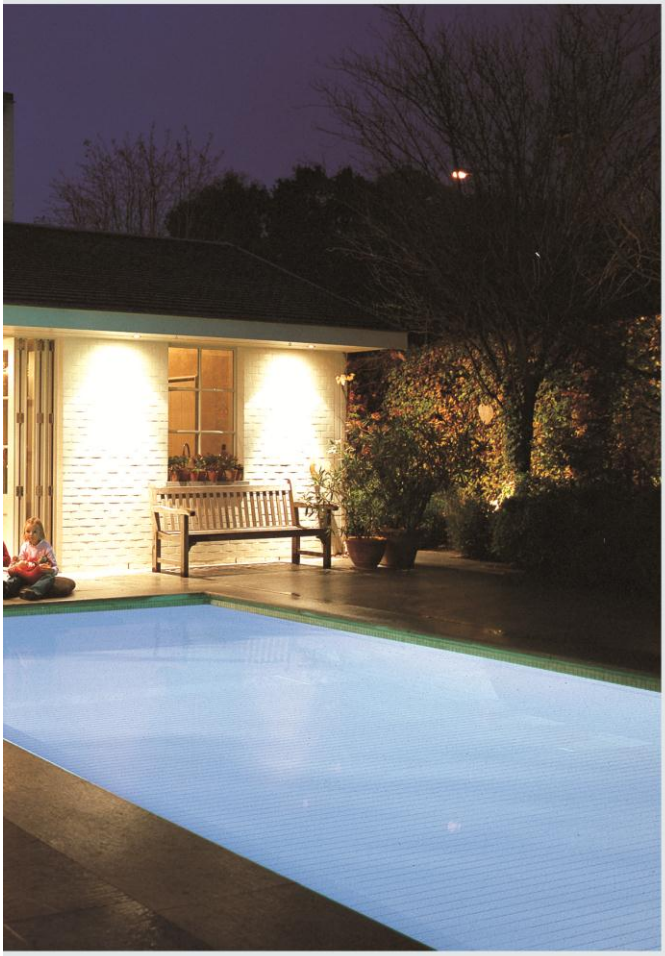
Nevertheless, a swimming pool can also be a place of great concern.

During your absence, your own children, neighbour's children or domestic pets can fall into the water, with all potential consequences.

AQUAROL removes all these concerns.

The legal obligations

There have been lots of accidents in private swimming pools. Therefore, the French government is the first institution to take measures. Each swimming pool has too be equipped with a safety fence is obviously not the most nice solution; an Aquarol cover looks nicer and better. It consists of light and strong plastic profiles: weather-and waterproofed and only requires low maintenance. It can be motorized as well so that you obtain a nice and safe system to close your pool. The Aquarol system has been developed in order to fulfill the NF P 90-308 specifications.

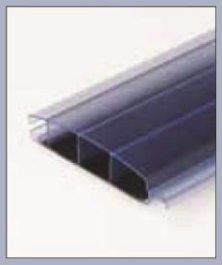


Fitting possibilities on every swimming pool.

Do you already have a swimming pool? No problem, Aquarol can be installed afterwards as well. When your swimming pool still has to be put in, you can integrate the cover into the concept. Aquarol is doubtless the best choice to optimize the safety around the swimming pool. Having one is talking away lots of concerns and potential accidents into the future.

Three more important features: energy saving, neatness and comfort.

The safety aspect is one important issue, but there is more… In winter times, it keeps the leaves and other dirt out of the water. Aquarol reduces maintenance and cleaning cost. The swimming pool cover has also excellent isolation qualities as it keeps the heat into the water at night. This is of course very comfortable and saves your energy costs up to 80% because you don't need to warm up the pool that often. Due to the sun light, the solar profile P75 even heats up the temperature of the water. There will be also fewer algae in the water. If your swimming pool is located inside your house, then Aquarol decreases the atmospheric humidity and protects at the same time the paint on your wallets.



Profile with an unknown carrying capacity

Aquarol consists of a P75 with the following dimension: 75x17mm and is available in a solar slat and five popular colour (white, vanilla, grey, and azure blue). The profiles click together which simplifies the assembly of the pool cover.

A 75mm profile contains more air than smaller variants and provides as such more driving force. When a weight is dropped on the closed cover additional barb ensures that the slats can't bend any further. Therefore the P75 slat has by far the largest carrying capacity on the market!

The P75 slat hinges both upwards and downwards so that it can be used for an external as well as for an underwater system. This advantage allows you to install the cover afterwards. All profile are NF-certified. Kindly note that the solar profiles are only available for underwater system. To prevent algae growth and permanent deformation of these particular profiles, it's necessary to have a filtration flow when the pool and saves a lot of energy costs.

The profiles are homemade. All materials are NF-ISO certificated
